## WHAT IS CLAIMED IS:

- 1. A computerized method of grammar checking a German language sentence, comprising:
  - parsing the sentence into a verb phrase and an initial noun phrase combination associated with the verb phrase;
  - accessing a morphology table to define an initial case combination associated with the initial noun phrase combination;
  - accessing a lexicon to define a correct case combination associated with the verb phrase;
  - comparing the initial case combination to the correct case combination and generating a case error combination; and
  - generating a combination of sentence rewrites that includes a grammatical case change to one noun phrase that corrects the case error combination.
- 2. The computerized method of grammar checking of Claim 1, further comprising:
  - displaying the sentence rewrites in an order from the most likely to the least likely to be accepted by a user.
- 3. The computerized method of grammar checking of Claim 1, further comprising:
  - limiting the number of sentence rewrites presented to no more than three rewrites per noun phrase.
- 4. The computerized method of grammar checking of Claim 1, further comprising:

- including a subject and any direct object and any indirect object associated with the verb phrase in the correct case combination.
- 5. The computerized method of grammar checking of Claim 1, further comprising:
  - generating the case error combination without access to the meaning of the sentence.
- 6. The computerized method of grammar checking of Claim 1, further comprising:
  - including corrections to the case endings of determiners, adjectives and nouns in the noun phrase in the sentence rewrites.
- 7. The computerized method of grammar checking of Claim 1 where the German language sentence has an implied subject, and further comprising:
  - inserting a fake subject in the initial noun phrase combination to facilitate the comparing.
- 8. The computerized method of grammar checking of Claim 1, further comprising:
  - filtering out of any sentence with a suspiciously complex combination before the comparing.
- 9. The computerized method of grammar checking of Claim 1, further comprising:
  - detecting noun phrase (NP) disagreement in the sentence and filtering out the sentence before the comparing.

- 10. A computerized grammar checker for a German language sentence, comprising:
  - a lexicon and a morphology table stored on a computer readable medium;
  - a sentence analysis engine receiving the sentence and generating a parsed initial noun phrase combination and a verb phrase, the sentence analysis engine accessing the morphology table and providing an initial case combination associated with the initial noun phrase combination;
  - an error detecting function accessing the lexicon and generating a correct case combination associated with the verb phrase; the error detecting function comparing the initial case combination to the correct case combination and generating a case error combination;
  - a target case calculation function generating a combination of sentence rewrites that includes a grammatical case change to one noun phrase that corrects the case error combination.
- 11. The computerized grammar checker of Claim 10, further comprising:
  - a display of the sentence rewrites in an order from the most likely to the least likely to be accepted by a user.
- 12. The computerized grammar checker of Claim 10, further comprising:

- a display of sentence rewrites limited to no more than three rewrites per noun phrase.
- 13. The computerized grammar checker of Claim 10 wherein the correct case combination includes:
  - a subject and any direct object and any indirect object associated with the verb phrase.
- 14. The computerized grammar checker of Claim 10 wherein the case error combination is generated without access to the meaning of the sentence.
- 15. The computerized grammar checker of Claim 10 wherein the sentence rewrites include;
  - corrections to the case endings of determiners, adjectives and nouns in the noun phrase.
- 16. The computerized grammar checker of Claim 10 where the German language sentence has an implied subject, and the parsed initial noun phrase combination includes:
  - a fake subject inserted in the initial noun phrase combination to facilitate the comparing.
- 17. The computerized grammar checker of Claim 10, further comprising:
  - a filter removing any sentence with a suspiciously complex combination before the comparing.
- 18. The computerized grammar checker of Claim 10,

## further comprising:

a detector of noun phrase (NP) disagreement in the sentence and a filtering out the sentence before the comparing when there is noun phrase disagreement.
